

Motion Detector

The Homeseer HSM100 is a unique 3-in-1 ZWave wireless device with PIR motion detector, light sensor and temperature sensor in a single compact unit. Primarily designed as a motion detector, it is compatible with any ZWave system and can be used to turn ZWave compatible light switches on or off based on the presence of motion. It can use the built-in light sensor to only turn lights on when there isn't enough ambient light in the room already. The motion sensitivity is also adjustable.

When used with Homeseer systems or select other control products, the HSM100 can report both temperature and light levels in the room for more advanced automation and triggers.

Homeseer HSM100 Features:

- ZWave compatible PIR motion detector
- 90 degree horizontal coverage, 30 foot scanning range
- Adjustable sensitivity helps to make it 'pet friendly'
- Programmable timeout for 'no activity'
- LED motion indicator
- Can control ZWave light switches/dimmers or be used with automation controllers
- Temperature sensor operating range 32F-104F (0-40C) - requires Homeseer
- Illumination sensor
- Battery level alert
- Up to 300 foot ZWave range (clear line of sight)
- Powered by 3 AAA batteries (typical life 1 year)
- 1 year warranty
