

Wall Plugs

Products:

Intermatic In-Wall receptacle (dual, one switched); 15A

Model:

CA3500

Description:

Use this Z-Wave Split Receptacle to control appliances, fluorescent lights, or other non-dimmable devices on your Z-Wave network. The top outlet is controlled by your Z-Wave network, and the bottom outlet is always on. You also have local control over the device plugged into the top outlet; when you turn the device off and back on using the power switch on the device, the Z-Wave Split Receptacle senses the load and allows the device to power up. This receptacle requires "hot" and "neutral wires plus ground.

Vizia RF +™ is the perfect image of “smart” lighting control, featuring Z-Wave® radio frequency technology and compatibility with Leviton’s Decora® products. The robust radio frequency system offers one-touch control of lights and appliances, dramatic scene transitions, timed events and many desirable options that will enhance your home. Vizia RF + products adapt to your lifestyle without the need for new wiring, providing a luxurious upgrade for less than you might imagine.

Vizia RF + 300W Scene Capable Plug-In Lamp Dimming Module. White
